

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

## IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

### Listing of Claims

1. (Currently Amended) A recording and reproducing apparatus comprising:  
an input element supplied with video signals;  
a recording element for recording said video signals input through said input element onto a storage medium;  
a reproducing element for reproducing said video signals from said storage medium;  
a processing element for generating display-ready video signals on the basis of video monitor image signals supplied by said input element and/or on the basis of the reproduced video signals furnished by said reproducing element; and  
a controlling element for selectively activating, by a single operation of a user, any one of a recording monitor image, a dual-screen display image made of a recording monitor image and a playback image, and a playback image alone,  
wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of said playback image.
2. (Currently Amended) A recording and reproducing apparatus according to claim 1, wherein said processing element generates a display screen indicative of ~~said~~ a screen

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

monitor image being selected when said dual-screen display image is currently on display.

3. (Currently Amended) A recording and reproducing apparatus comprising:
- an input element supplied with video signals;
  - a recording element for recording said video signals input through said input element onto a storage medium;
  - a reproducing element for reproducing said video signals from said storage medium; a processing element for generating display-ready video signals on the basis of video monitor image signals supplied by said input element and/or on the basis of the reproduced video signals furnished by said reproducing element; and
  - a controlling element for making operations of a user effective on one of a recording monitor image and a playback image constituting a dual-screen display,
- wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of said playback image.

4. (Original) A recording and reproducing apparatus according to claim 3, wherein said controlling element causes said processing element to enlarge the currently selected image on display.

5. (Currently Amended) A recording and reproducing apparatus comprising:
- an input element supplied with video signals;
  - a recording element for recording said video signals input through said input element onto a storage medium;

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

a reproducing element for reproducing said video signals from said storage medium;

a processing element for generating display-ready video signals on the basis of video monitor image signals supplied by said input element and/or on the basis of the reproduced video signals furnished by said reproducing element; and

a controlling element which, when a follow-up playback is catching up with an on-air recording, then activates a full-screen display of a recording monitor image while giving a sign indicating that said recording monitor image is now activated and on full-screen display,

wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of a playback image.

6. (Currently Amended) A recording and reproducing apparatus comprising:

an input element supplied with video signals;

a recording element for recording said video signals input through said input element onto a storage medium;

a reproducing element for reproducing said video signals from said storage medium;

a processing element for generating display-ready video signals constituting a recording monitor image and a playback image in a dual-screen display, on the basis of video monitor image signals supplied by said input element as well as on the basis of the reproduced video signals furnished by said reproducing element; and

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

a controlling element for giving a sign indicative of ongoing recording near said recording monitor image, and another sign indicative of ongoing playback near said playback image,

wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of said playback image.

7. (Original) A recording and reproducing apparatus according to claim 6, wherein, when recording is stopped, then said sign indicative of ongoing recording is erased.

8. (Original) A recording and reproducing apparatus according to claim 6, wherein, when playback is stopped through an operation by a user, then said sign indicative of ongoing playback is replaced by another sign indicative of a pause, with said playback image turned into a still image.

9. (Currently Amended) A recording and reproducing method comprising the steps of:

- recording input video signals onto a storage medium;
- reproducing the video signals from said storage medium;
- generating display-ready video signals on the basis of video monitor image signals derived from said input video signals and/or on the basis of the reproduced video signals;
- and

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

selectively activating, by a single operation of a user, any one of a recording monitor image, a dual-screen display image made of a recording monitor image and a playback image, and a playback image alone,

wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of said playback image.

10. (Currently Amended) A recording and reproducing method comprising the steps of:

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

generating display-ready video signals on the basis of video monitor image signals derived from said input video signals and/or on the basis of the reproduced video signals;  
and

making operations of a user effective on one of a recording monitor image and a playback image constituting a dual-screen display,

wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of said playback image.

11. (Currently Amended) A recording and reproducing method comprising the steps of:

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

generating display-ready video signals on the basis of video monitor image  
signals derived from said input video signals and/or on the basis of the reproduced video signals;  
and

when a follow-up playback is catching up with an on-air recording, then  
activating a full-screen display of a recording monitor image while giving a sign indicating that  
said recording monitor image is now activated and on full-screen display,

wherein the display-ready video signals of said recording monitor image  
are independent of the display-ready video signals of a playback image.

12. (Currently Amended) A recording and reproducing method comprising  
the steps of:

inputting video signals;

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

generating display-ready video signals constituting a recording monitor image and  
a playback image in a dual-screen display, on the basis of video monitor image signals derived  
from said input video signals as well as on the basis of the reproduced video signals; and

giving a sign indicative of ongoing recording near said recording monitor image,  
and another sign indicative of ongoing playback near said playback image,

wherein the display-ready video signals of said recording monitor image  
are independent of the display-ready video signals of said playback image.

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

13. (Currently Amended) A program storage medium which stores a program for causing a computer to execute the steps of:

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

generating display-ready video signals on the basis of video monitor image signals derived from said input video signals and/or on the basis of the reproduced video signals;  
and

selectively activating, by a single operation of a user, any one of a recording monitor image, a dual-screen display image made of a recording monitor image and a playback image, and a playback image alone,

wherein the display-ready video signals of said recording monitor image are independent of the display-ready video signals of said playback image.

14. (Currently Amended) A program storage medium which stores a program for causing a computer to execute the steps of:

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

generating display-ready video signals on the basis of video monitor image signals derived from said input video signals and/or on the basis of the reproduced video signals;  
and

making operations of a user effective on only selected one of a recording monitor image and a playback image constituting a dual-screen display,

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

wherein the display-ready video signals of said recording monitor image  
are independent of the display-ready video signals of said playback image.

15. (Currently Amended) A program storage medium which stores a program  
for causing a computer to execute the steps of:

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

generating display-ready video signals on the basis of video monitor image  
signals derived from said input video signals and/or on the basis of the reproduced video signals;  
and

when a follow-up playback is catching up with an on-air recording, then  
activating a full-screen display of a recording monitor image while giving a sign indicating that  
said recording monitor image is now activated and on full-screen display,

wherein the display-ready video signals of said recording monitor image  
are independent of the display-ready video signals of a playback image.

16. (Currently Amended) A program storage medium which stores a program  
for causing a computer to execute the steps of:

recording input video signals onto a storage medium;

reproducing the video signals from said storage medium;

generating display-ready video signals constituting a recording monitor image and  
a playback image in a dual-screen display, on the basis of video monitor image signals derived  
from said input video signals as well as on the basis of the reproduced video signals; and

U.S. Patent Application No. 09/904,319  
Reply to Office Action dated December 9, 2005

PATENT  
450100-03342

giving a sign indicative of ongoing recording near said recording monitor image,  
and another sign indicative of ongoing playback near said playback image,  
wherein the display-ready video signals of said recording monitor image  
are independent of the display-ready video signals of said playback image.
